MAËL RABOT

DEVELOPPER // STUDENT

4th-year Computer Science student with a passion for software architecture and low-level development. Experienced in full-stack web development, mobile applications, C/C++, and robotics.

Curiously driven and versatile, I am eager to contribute to innovative projects while expanding my expertise into video game development. I am a proactive collaborator looking for new technological challenges and opportunities.

EXPERIENCES

Co-Fondateur, Chef de projet, Developpeur

Sentience Robotics — 08/2024 - Now

- Humanoid Robot Construction: Engineered and assembled a humanoid robot platform.
- Robotics Interface Framework: Developed a software abstraction layer for unified robot control.
- HMI Optimization: Improved Human-Machine Interaction for better system monitoring and control.
- Open-Source Project: Contributed to collaborative development within an open-source community.

Fullstack Developper

Audiowizard — 09/2024 - 08/2025, 07/2023 - 12/2023

- Full-stack Development: Developed and optimized core features for hearing aid specialist management software.
- Database Management: Handled administration, maintenance, and optimization of relational databases.
- System Reliability: Ensured 24/7 operational maintenance and provided rapid incident resolution (L3 support).
- Tooling & Mentorship: Implemented a Forest Admin back-office and mentored junior interns.

R&D Developper

PoC — 03/2023 - 08/2023

- AI Prototyping: Researched and prototyped innovative solutions in AI, Web3, and AR/VR.
- ML Implementation: Implemented and experimented with theoretical Machine Learning models.
- Data Management: Managed and administered databases for various research-driven projects.
- Deep Learning Focus: Specialized in Convolutional Neural Networks (CNNs) and Generative AI.

SKILLS

LANGUAGES

- C++ / C
- Js / Ts / React
- Kotlin
- Python
- PHP / MySQL
- Git / Bash

SOFT SKILLS

- Teamwork
- Organization
- Proactivity
- Client Relations

LANGUAGES

- French — Native
- Anglais — C1

Crew Member

Burger King — 07/2021 - 09/2022

- High-Volume Operations: Managed kitchen and counter service in high-traffic environments, ensuring strict quality and speed standards.
- Customer Relations: Maintained high satisfaction levels and effectively resolved customer inquiries and feedback.
- Staff Mentorship: Trained and onboarded new hires, ensuring the successful transfer of internal procedures and best practices.

EDUCATION

Master's Level Professional Certification in Software Engineering & Information Technology

EPITECH — 09/2022 - 07/2027

- Institutional Representation: Represented the school at open houses and delivered presentations to prospective students.
- Coding Club Management: Led and organized programming workshops, including the design of technical curriculum and educational materials.
- Team Leadership: Coordinated association members and mentored participants, fostering team dynamics and educational growth.

Exchange Student

Chung-Ang University, Corée du Sud — 09/2025 - 07/2026

- Technical Immersion: Enhanced CS skills within an international academic environment, adapting to diverse learning methodologies.
- Global Collaboration: Developed strong intercultural communication skills and adaptability in a multicultural setting.

PROJECTS

RTYPE - GAME ENGINE — 09/2024 - 11/2024

https://github.com/ASM-Studios/R-Type

Game engine made in C++

- Network game engine
- ECS Implementation

AREA — 11/2024 - 01/2025

https://github.com/ASM-Studios/AREA

Workflow Automation Tool: A microservices-based platform (Go, React, Flutter) featuring OAuth integration, 2FA security, and RabbitMQ for asynchronous service communication.

LUCY — 08/2024 - Now

https://github.com/orgs/Sentience-Robotics/repositories

- Unified Control Layer: Developed a modular software framework to unify and abstract the control of humanoid robots (sensors and actuators) through a centralized C++ API.
- Hardware Lifecycle Management: Leveraged ROS 2 and ros2_control to manage complex hardware states, optimized for the NVIDIA Jetson Orin main computer.
- Digital Twin & Simulation: Engineered a real-time supervision dashboard for monitoring and teleoperation, supporting both physical hardware and simulated models via NVIDIA Isaac Sim and URDF configuration.
- Standardized Interfacing: Implemented a robust interface layer to facilitate the seamless integration of external applications, specifically designed for high-level AI decision-making systems.
